Application

- slideway oils
- industrial gear oils
- metalworking fluids
- greases

Additin RC 2516 is a light-colored sulfur carrier with excellent solubility, even in highly refined base oils. Due to its outstanding EP properties and low activity against nonferrous metal Additin RC 2516 is ideally suited for formulating slideway oils with good anti-stick-slip behavior. The special chemical structure and the improved solubility make it possible to use Additin RC 2516 in highly refined base fluids, where conventional EP products are not soluble.

Additin RC 2516 is especially suited for use in metalforming operations of ferrous and non-ferrous metals and alloys containing yellow metals.

Solubility

Soluble in mineral oils and synthetic base oils, Group II and Group III. However, it is necessary to verify the solubility in the base oils used and the compatibility with other additives.
